

Petchase

Final Year Project (2018-2022)

Comsats University Islamabad, Lahore Campus

Baf Baw

Introduction

"Petchase" is a web based application and it will be a useful platform for the people who love to keep pets as well as for those who earn through selling and purchasing of pets.

Motivation

Due to busy life routine it has become very difficult for the people to go find and buy pets from the market so we have purposed a solution for this. using this application people will be able to buy pets at home.

Methodology

A person will login through the application first and scroll through the pets on the home screen then and he can click on the desired pet and select message option, by doing this he will be able to chat with the user who has posted the pet and then both the users can negotiate about the pet price. The person can also become a user and post some pet if he wants to sell the product. All these actions will be stored in the database.

Technology

Conclusion

After a lot of struggle we are able to build an application that perform all the function which are defined in the requirements.
